<b>Remarks</b>	<ul style="list-style-type: none"> <li>❖ In order to extend the lifetime, it is recommended to configure the load more than 20% of the remaining allowance. For example: the power of the device requires 100W, then use the power of not less than 120W.</li> <li>❖ Ripple test method at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf &amp; 47uf parallel capacitor.</li> <li>❖ All parameters NOT specially mentioned are measured at 230VAC input,rated load and 25°C of ambient temperature.</li> <li>❖ The power supply is considered as a component that will be operated in combination with final equipment.All EMC tests are carried out by installing the sample on the metal plate. The power supply should be combined with the terminal equipment for EMC test.</li> </ul>
